Issue Type	Description	Comments	PASS/FAIL		
Manifest Check	The following tags need to be in the manifest file and they need to have content:			Pass=GREEN	
Walliest Check	The following tags need to be in the manifest life and they need to have content:			Fall-RED	
AppDescription	A dictionary with localized short descriptions (max 60 chars) of the application. Must be localized. All languages listed needs to have the appropriate IETF tags. Currently these are: de, en, es, fr and nl.  Check that all three image sizes are present:				
Applcon	* 36x18 (18x18 will work, but then point 5.2 below will fail) * 64x64 * 128x128 No images should be smaller than 18x18.	Cover arts should be displayed in standard sizes: 256x256, 200x200, 150x150, 128x128, 64x64, 54x52 and 40x40 pixels.			
AppName	A dictionary with localized user-displayable names for your application, e.g. My Application. Must be localized. All languages listed needs to have the appropriate IETF tags. Currently these are: de, en, es, fr and nl.				
	Must be in lower case and be an exact match to that of the app folder name. The characters allowed in the manifest are a-z, 0–9 and '-'.  Must be "Application".				
	Should now follow semantic versioning format (MAJOR.MINOR.BUGFIX). e.g. 1.0.0 and be updated increasingly for each version. See http://semver.org/ for reference.  A list of languages that the application is localized in. All languages listed needs to have the				
	appropriate IETF tags. Currently these are: de, en, es, fr and nl.  Must always contain the value 1. Should not be in quotation, then the 1 is parsed as a				
RequiredInterface	Requires a reverse format. e.g. com.spotify (not spotify.com)				
	Temporary check - for now please declare dependencies in the manifest.	See this page for more information: https://developer.spotify. com/blog/2012/07/31/versioning-the- spotify-apps-api/			
Basics					
Dasics					
App folder name	The folder name of the app should be an exact match to that of the Bundleldentifier. It should be in lower case and not contain any other letters than those in the Bundleldentifier	i.e. if the Bundleldentifier is "jam" then the app folder name should be "jam", and not "jam app 1.0.2" for example.			
		(This answer for the developer is for the transitional phase. Noter that in the future we will not allow this): We are introducing an update to the guidelines that will strongly discourage any -ify suffix in the app name. This will take effect within soon. In the future we could propose to transition to a new name that follow our guidelines to partners that currently have an -ify suffix.			
	Our partners should not choose an app name that ends in "-ify".				
Does the app start?	No crashes, no eternal loading?	For example, in "Hot or Not" where you can vote if you like the song or not. So in that case, does the voting work at			
	Does the main purpose feature work at all?  How does the app handle being in Offline Mode/disconnected? No content of the app should be accessible during Offline Mode or in disconnected state. The app should restore its last state after being reloaded (Scroll position and current content.	all?			
Indexing	If the app has a feature that enables the user to add and remove tracks to a playlist, make sure that you can only add as many tracks as intended. And if you remove tracks, make sure that the track numbers update correctly.				
	Check for memory leakage. Should not exceed 500 000 K. There should be no sudden increase in CPU usage when the app is passive.  Licence agreement checkboxes may not be checked by default and must have the correct			Create your personalized concert of  I understand that when I beyond may Gonglish account about my Spotty use, such as it may and interior produced and use of this information will be governed by the Soy	tales. Cover art	Cover arts larger than 40x40 should include a play button in the lower right corner if it's			- Iwa
Cover art	Whenever possible, use the Spotify standard buttons such as "+ Subscribe", "Show all		SPINISE.	RECORDS
Buttons	tracks" buttons.			
Navigation and mouse cursor				
Havigation and mouse culsul				
	When clicking on an Album or Artist image, the image should take you to the corresponding			
Album- or Artist images	Native Album/Artist page in Spotify. Buttons should work properly with the app.			
	Does clicking the Spotify "back" button take you to the point where you were before?			
	Does the content load the way it was or does it change?			
	· Do you come back to the top of the page when you should be able to continue browsing from where you left off? (Regard this from case to case. In some apps this is more critical			
Spotify Back / Forward-buttons	than othres, depending on design and amount of content).			
	Do they work?			
External links	Do they point to the correct page?     Are they correctly displayed with external link icons?	External links should not be used excessively, only when necessary.		

	· When hovering a paused button image, it should change to the play icon. The Pause				
	icon should not be visible when NOT hovering the image.				
Di. 1. 11	When playing, the button image should be a speaker with the volume bar present.				
Play button on album images					
Mouse sureer on album images	Mouse cursor on album images should be a pointing hand when hovering the album art,				
	and an arrow cursor when hovering the play button.				
	Mailto: links work and have the external link icon next to them				
labs	If tabs are used, it's the standard Spotify tabs (defaultTabs).				
Hondor	The "header" shouldn't be higher than 60 pixels and if used as a link it should point at the app root rather than to a website.				
пеацеі	If a logout button exists, it shouldn't be put in the logo header or navigation bar, instead				
Logout feature	place it close to profile information or in the footer.				
Logout loature	place it close to profile information of in the rooter.				
Content					
Content					
	The app should not look empty. When applicable, there should be at least 15 playlists,				
Amount of content	articles, reviews etc.				
	Is there any missing content (missing text, cropped text etc)?				
Wilsoling Content	Does sharing to social media work?				
Social media sharing	· How is shared content displayed on social media?				
	All music available in or through the app should be playable to the user.				
Charanasio contone	The app handles client resizing (elements align and overlap appropriately, functionality isn't				
Client resizina	compromised). The app handles small screen resolutions.				
	There should be no self made buttons for adding the app to the sidebar				
	The chosen colors of the app gives a pleasant viewing experience.				
	Text with font size up to 18px should one of the fonts: Lucida Grande, Helvetica or Georgia.				
1 51.00	Tox man one one of the representation of the following designation of the				
Tracks and playlists					
Tracks and playlists					
		There is a potential bug within the			
		Spotify API that does not always sync			
		this between views. But this of course			
		needs to be checked nevertheless in			
Now Playing	When you play a track, is it highlighted in the playlist?	the app.			
	Does starring and unstarring work?				
Adding/removing playlist	Does adding playlists work? And removing them?				
	It should not be possible to add the same playlist multiple times.				
ppqqqqqq.	There should only be one option of either "Add as playlist" or "Subscribe". Not both, since				
	they are different types of actions. Subscribe button disappears after it's been pressed, then				
Adding or subscribing	re-appears if the playlist is unscubscribed.				
	Test for a lot of data being loaded into the app. Add large playlists (~500 tracks) and see				
	how the app handles this. Run the app with an account that has hundreds or even				
Large Scale Testing	thousands of friends.				
Search functions	If the app has a search function, verify that it works as it should:				
	Albums/tracks/artists that are represented in the app should also be able to find using the				
Albums/tracks/artists	native search function.				
	When dragging Spotify URI:s into search fields - can you use them in any logical manner, ie				
	can you listen to the track? Do you get a valid search result? If not, then they should not be				
Draggable URI:s					
Drop-down menus	Drop-down menus should disappear when clicking anywhere outside it.				
	If a track is unavailable in the user's region but still showing as a "placeholder" (i.e.				
	disturbing your user experience, because you want to click on the album image or track etc, but you can't because the error message says it's unavailable in your country).				
	but you can't because the error message says it's unavailable in your country).				
	Here's what you do and tell the partner:				
	The second to th				
	1.) Check if the track is available somewhere else on Spotify, i.e. on some other album. If				
	this is the case, link the track there instead.				
	2.) If the track/album isn't available somewhere else on Spotify, it should be hidden and the	See screenshot for example of a	Hake He Proud - Albu	m Version (Edited)	
	next playable track should be played instead.	"placeholder" for unavailable tracks.	Drake Nick		
Additional tests					
	If a tutorial POP-UP is shown on start-up (i.e. information on how to use the app), it should				
Tutorial POP-UP	only be shown once and not every time you start the app.				

		As reference, add a playlist made by			
		the user thecompletecollection, i.e.			
		"Donna Summer: The Complete			
		Collection" as a playlist and try to open			
	When applicable, check what happens with the playlist ID if the user who created it is	it in all possible ways that the app			
Democrat condendariate		offers.			
Removed user's playlists		oners.			
	Any user generated content should be prompted to be saved. The user should not lose any				
	content that they create, i.e. if they can create a playlist and the playlist disappears when				
User generated content and saving	they log in to for example, Facebook.				
	Continuous scrolling (showing more content when reaching the bottom) should, when				
	possible, be used instead of using "Show more" buttons. However, we don't want nested				
Scrollbars	scroll bars, generally, if it is not 100% needed for the app function.	See screenshot of a nested scrollbar.			
	Does characters and symbols (Öö & ´,' '''\%;日本国, ْعَرَبِيْ ) Å äÄ å üÜ) appear correctly				
Special character encoding	when sharing to social media, saving as playlists and other dynamic content?				
	No sticky footer, unless it is absolutely 100% needed for the app function. For example, for				
Sticky footers	Sharemyplaylists it is ok to use sticky footer.			estweet.	
	The app adjusts to ads: Bottom and side banner will re-size the app. Seeking or skipping		Charles 1.0	V20000	
Adjustment to ads	tracks will be unavailable during vocal ads.		E.	5400 F-0.7	
	Spotify native throbber should be used to indicate when something is loading.			Sing and	
THIODDE	No HTML/JS land errors should be displayed in the web inspector (right-click and select				
	show inspector to invoke it). App should not violate the sandbox, exceptions are thrown etc.				
	should not be displayed in the Spotify application's console. Can be viewed by Console.app				
	on Mac OS X, and using Spotify's internal console on Windows (press Ctrl+Alt+Home when				
Errors on inspector and console	Spotify is in focus to invoke it)				
Operation systems	Works on both PC and Mac.				
	When applicable, logging in with another Facebook/Twitter (etc) account should work.				
71	Testing your app for free-tier:				
	Your app should work for free users as well as it does for premium. To ensure that the app				
	works, please use the following URI to invoke our ad format:				
	works, please use the following ORI to invoke our ad format.

Spotify's stance on blogs:  * General Rule: direct links to blogs are a no as we can't control the content.  * An individual's blog will not be approved.  * Larger blogs may be e.g. Pitchfork, newspapers. Spotify will need to approve each of these and allow you a defined list only.  If the app provides an external link to a page or service that contains any music video or music players, we require that the page or service also provides a link of equal prominence to the Spotify music service.  Preferrably, it should be a link back to your Spotify app or an embedded Spotify Play Button that plays the related music.  If the app contains external links, the party with control of the Spotify app must have a takedown policy and mechanism to promptly remove any links reported as inappropriate	approved in its current form
